2026

Technology that streamlines the way your business runs

Vektora Project is an information technology solutions provider helping companies design, build, and maintain the systems they rely on every day.

We work from the root of the problem: mapping business processes, simplifying workflows, and translating them into systems that are genuinely used by field teams — not just installed software.

Our core expertise lies in ERP implementation, and we expand these capabilities into custom software development, cross-system integration, cloud infrastructure, and operational support.

Rooted in ERP

Core experience in systems managing finance, inventory, and production.

End-to-End Scope

From requirements analysis and development to go-live and maintenance.

Long-Term Partnership

We do not stop once the system is live. We support you until full stability.

Where we are headed

VISION

To be the trusted technology partner for companies looking to grow with well-structured, measurable, and scalable systems.

"A good system makes work feel lighter, not more complicated."

MISSION

- Delivering solutions that solve real business problems, rather than just fulfilling feature checklists.
- Maintaining high quality through documented, transparent work processes.
- Building scalable systems designed to expand seamlessly as clients grow.
- Supporting clients post-implementation with prompt, responsive assistance.

One partner for all your IT needs

ERP Implementation

Process analysis, module configuration, data migration, training, and go-live assistance.

Custom Software Development

Tailored internal applications built around your company's specific workflows.

Web & Mobile Applications

Company profiles, customer portals, e-commerce, and operational mobile apps.

System & API Integration

Connecting ERP, POS, marketplaces, and payment gateways into a seamless data flow.

Cloud & Infrastructure

Server planning, deployment, automated backups, baseline security, and monitoring.

IT Consulting & Business Process

Process audits, system blueprints, and medium-term technology roadmaps.

End-to-End ERP Implementation

ERP is the backbone of our services. We understand that implementation failures are rarely caused by technology — but rather by unmapped processes and unprepared users.

- Business process mapping & blueprinting
- Module configuration & feature customization
- Legacy system data migration
- User training & comprehensive documentation
- Go-live support & hypercare assistance

MODULES WE HANDLE

Finance & Accounting

Inventory & Warehouse

Manufacturing

Sales & Distribution

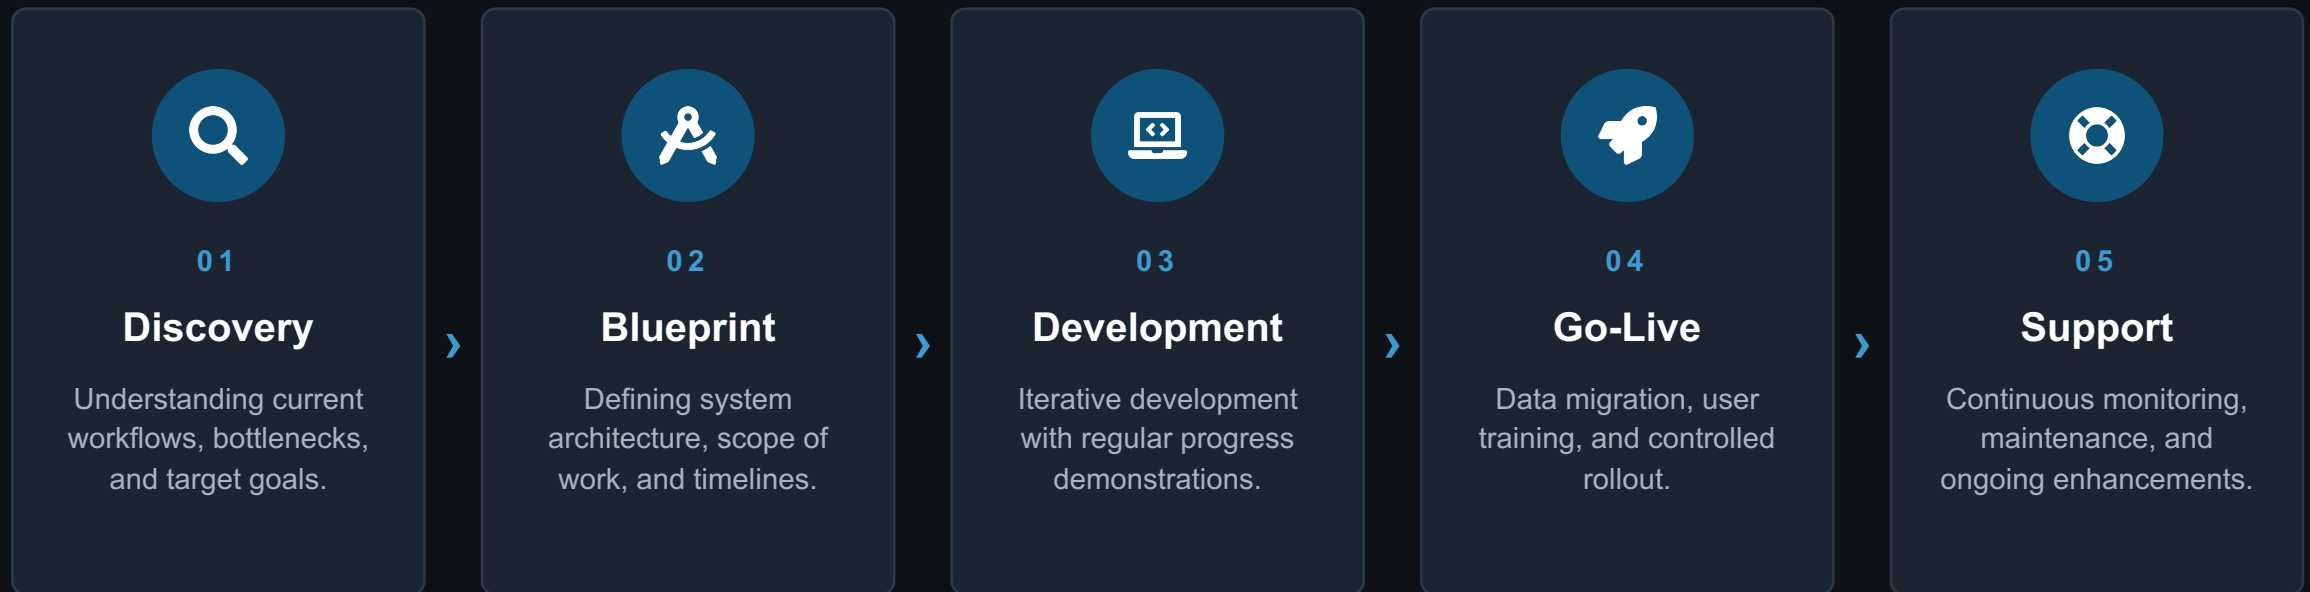

Purchasing & Supply

HR & Payroll

Five stages, zero surprises along the way

Each phase concludes with formal documentation and written sign-off, keeping scope and budget firmly under control.

Technology stack we use

Technology selection is always tailored to requirements, budget, and the client's internal team readiness.

ERP Platforms

- Odoo
- ERPNext
- SAP B1
- Custom ERP

Backend & Web

- Python
- PHP / Laravel
- Node.js
- REST & API

Frontend & Mobile

- React
- Vue
- Flutter
- Progressive Web App

Data & Infrastructure

- PostgreSQL
- MySQL
- Docker
- Cloud / VPS

Three ways to collaborate with us

Project-Based

Scope and budget agreed upfront.

- ✓ Ideal for well-defined deliverables
- ✓ Clear timelines & deliverables
- ✓ Post-launch maintenance warranty

Managed Service

Continuous support with a predictable monthly fee.

- ✓ Routine monitoring & maintenance
- ✓ Dedicated monthly development hours
- ✓ Priority response SLA

Team Augmentation

Our engineers act as an extension of your in-house team.

- ✓ Staffing matched to your skill requirements
- ✓ Flexible month-to-month commitment
- ✓ Knowledge transfer to client teams

Industries we serve

Every industry has its own workflows and terminology. We master them before writing the first line of code.

Manufacturing

Production planning, bill of materials (BOM), and raw material inventory control.

Retail & F&B

POS integration, multi-outlet management, and daily sales tracking.

Distribution & Logistics

Warehouse management, dispatch logistics, and customer billing.

Agribusiness

Harvest yield recording, supply chain tracking, and cost of production.

Services & Construction

Project management, milestone billing, and job costing.

Education

Academic administration, billing, and information portals.

Why clients entrust their systems to us

Business-First, Not Just Code

We start with "what is the real problem?", not "which technology should we use?".

Proportional Solutions

We do not push over-engineered systems. The scale of the solution matches the scale of your business.

100% Client Ownership

Source code, data, and documentation remain 100% client-owned.

Direct & Accessible Support

Single communication channel, rapid response, no queue hopping.

LET'S COLLABORATE

Tell us about your needs, we will craft the blueprint.

Initial consultation and project scope estimation are completely free of charge.
